Helm

Helm is the package
manager for Kubernetes

CLARUSWAY©
WAY TO REINVENT YOURSELF

▶ Three Big Concepts

A **Chart** is a Helm package. It contains all of the resource definitions necessary to run an application, tool, or service inside of a Kubernetes cluster.

A **Repository** is the place where charts can be collected and shared.

A **Release** is an instance of a chart running in a Kubernetes cluster. One chart can often be installed many times into the same cluster. And each time it is installed, a new release is created.
